DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: ***

Philips'954.and Fujita'329 disclose a linear motor with multiphase armature comprising a magnet track and magnet assembly coupled to the magnet track, with plurality of side-by-side alternating magnetic north poles and magnetic south poles the plurality of side-by-side electrically conductive coils they do not teach **each pair of adjacent conductive windings of each layer electrically isolated from each other on the layer, each electrically conductive winding of each layer positioned in registration and electrically connected to a corresponding electrically conductive winding on each other layer**

The prior art including **Philips'954.and Fujita'329** fail to teach a magnet assembly coupled to the magnet track, the magnet assembly having a plurality of side-by-side alternating magnetic north poles and magnetic south poles; and a linear armature having a plurality of side-by-side electrically conductive coils formed on an electrically **and magnetically nonconductive substrate which is movably coupled to the magnet track such that the side-by-side electrically conductive coils are positioned and movable in spaced parallel relation to the side-by-side alternating magnetic poles, the substrate including a plurality of electrically nonconductive layers laminated together, each layer having a plurality of electrically conductive windings formed thereon in side-by-side relation on at least one surface thereof with each pair of**

adjacent conductive windings of each layer electrically isolated from each other on the layer, each electrically conductive winding of each layer positioned in registration and electrically connected to a corresponding electrically conductive winding on each other layer to form one of the electrically conductive coils.
